Title: METHOD AND DEVICE FOR THE QUANTIFICATION OF RADIONUCLIDES IN LIQUID MEDIA	
Abstract: The present invention relates to a method for the quantification of radionuclides in liquid media comprising measuring a gamma-ray spectrum, a device for the quantification of radionuclides in liquid media and the use for the quantification of radionuclide concentrations in hydrometallurgical processing media, especially the quantification of uranium and/or radioactive uranium decay product concentrations in uranium mining solutions or in uranium recovery solutions or the quantification of thorium and/or radioactive. The decay products in rare-earth element processing solutions.

Title: A SALT RECOVERY SOLUTION AND PROCESSES OF USE THEREOF	
Abstract: The present invention relates to a salt recovery solution and to a process for separating a salt from an aqueous solution. The present disclosure also relates to a salt recovery solution and to its use to concentrate a salt or brine solution by recovering water therefrom. The salt recovery solution suitable 5 for recovering a salt from an aqueous solution comprises at least one tertiary amine containing compound; and at least one enolisable carbonyl.

Title: METHOD FOR PREPARING MICRO-PARTICLES BY DOUBLE EMULSION TECHNIQUE	
Abstract: Methods for preparing micro-particles using a double emulsion technique combining a membrane and a micro-sieve are provided. Particularly the present invention relates to method for preparing micro-particles comprising: preparing a first phase comprising an active agent; preparing a second phase comprising a carrier and a solvent; passing the first phase and the second phase through a membrane to form a primary emulsion; passing the primary emulsion through a micro-sieve in a continuous phase to form a secondary emulsion; and removing the solvent to form the micro-particles.

Title: FLOATING PLATFORM	
A floating platform for a wave energy converter (WEC), comprising a hollow body, in which energy converting machinery may be positioned. The floating platform has an underside facing the water in use, an upper side facing the opposite direction and a first long-side forming a front and a second long-side forming a back, and two short-sides, at least one aligning means is provided, configured to align the front of the floating platform with the wave front, i.e. perpendicular to the direction of the wave, the front of the floating platform is at least 30 m long, the length of the front is at least two times the length of the side, the height of the floating platform is at least 1 m, wherein the floating platform is made up by means of a composite sandwich construction and the platform is configured to work in waves of deep sea shape at a sea depth of more than 1.3 times the highest probable mon ster wave in the relevant area.

<div>Title: ATTENUATED DENGUE VIRUSES</div> <div>Abstract: The present invention provides for modified Flavivirus such as a modified dengue virus type 1,2,3,4, a combination of these, or a tetravalent combination of these. The modification according to various aspects of the invention results in reduced viral protein expression compared to a parent virus, wherein the reduction in expression is the result of recoding one or more regions of the virus. For example, the prM, or envelope (E) region can be recoded. In various embodiments one or more regions are recoded by reducing the codon pair bias or codon usage bias of the protein-encoding sequence. These modified Flaviviruses are used as vaccine compositions to provide a protective immune response.</div>

The difference is that the existing system is designed for boundary walls and little effort was made to make the system multi-purpose. Our can can be used both for boundary walls and structural construction (residential commercial and industrial). This is due to pre-fabricated doors and windows. For structures more than one floor, Pole can be cast-in floor to allow for installation of doors and windows.
